Vegetable Plants

Showing a Section of Our Hotbeds.

We can supply in any quantity, in their proper season, all vegetable plants here mentioned, and ship directly from beds, well packed, on the shortest notice. NOTICE—If we should for any reason be out of any variety ordered, we will send some other similar variety in place of it, unless requested to the contrary.

At prices quoted, they are sent by express at purchaser's expense, excepting where noted by mail. As plants are perishable, we advise all large lots to be forwarded by express. They must be sent separately from any greenhouse plants, roses, etc. We do not send vegetable plants with greenhouse plants.

Frost-Proof Cabbage Plants.

Ready January 1st.

These are hardy outdoor-grown plants that will stand any kind of weather. The seed is planted in October and November, in a section in the South especially suited for this purpose. We are growing several million of plants this year, and will be able to supply all orders. By recent experiments, we have located a desirable climatic condition near the Gulf, and the plants will be satisfactory in every way.

The Frost-Proof Plants may not look a bright, green color, like the tender hotbed seedlings, as naturally their outdoor winter growth, standing through frosts, light freezes, discolors them and gives them a stunted appearance. Set them out, and their excellent growth, as soon as the weather warms up, will make you forget how they looked.

The use of open air, practically frost-proof, cabbage plants, often enables the truck gardener to put full grown heads of cabbage on the market two or three weeks ahead of the ordinary home-grown plants, and of course he gets the top prices for his crop.

These plants are from the very best grown seed, and will be sent both from Memphis and from our grower at purchaser's option at prices below.

Will have the following varieties—Early Jersey Wakefield, Charleston or Large Wakefield, Early Flat Dutch and Succession.

Schwill's 1917 Catalogue

OF

Seeds, Trees, Plants and Poultry Supplies

TO OUR FRIENDS AND CUSTOMERS

Memphis, Tenn., January 1, 1917.

We take this method of thanking our numerous friends and customers for their patronage. Our fast increasing trade in all departments proves that our efforts to supply the best seeds are giving the desired results. Our stocks are selected especially for this and the Southern country, and with the coming season we will be better prepared than ever to supply customers with our own brand BLUFF CITY SEEDS of the very highest quality.

Our mammoth four-story warehouse is equipped with most modern cleaning and elevating machinery, and no firm in the South is better prepared to furnish you with good, clean seeds that have sure enough been re-cleaned. We do not and will not handle or offer any seed of low grade. Remember, the best is the cheapest, as low quality seeds are the most expensive thing you can buy.

Our prices are also right. Look through the catalogue carefully, and we know if you buy seeds, that it is not necessary to send away to Eastern or Northern houses for them, when you compare notes, and we ask a trial order; we assure you satisfaction. Thanking our many customers for past favors, and trusting to have a continuance of same, we remain,

Yours faithfully,

This offer applies to prices on all Garden and Flower Seed, Beans, Peas and Corn, as quoted in this catalogue, except on Market Gardeners' price list, on pages 2 and 3, or any collections. Look through our list of seeds carefully. It will pay you to club with your neighbors and get your seeds at a big discount. Also remember our prices, excepting on pages 2 and 3, are all parcel post paid.

WE PAY POSTAGE on all seeds quoted by the packet, ounce, quarter pound and pound, and upon all goods quoted in our catalogue where it says parcel post paid.

NOTICE CAREFULLY THE PRICES. Be sure to know whether we or you are to pay the carrying charges, and bear in mind that we do not pay the express or freight charges on pecks or bushels, nor on any tools, bulbs, grass seeds, field seeds or fertilizers, except where we so state on the pages where the goods are priced.

ALL CLAIMS must be made upon receipt of goods. Our responsibility ceases after goods are delivered to transportation company, and we can assume no liability after delivery to railroad company.

OUR RELIABILITY. New customers may hesitate to send money to a firm they know nothing about. We should be pleased to have you

inquire as to our responsibility of Bradstreet's or Dun's Commercial Agencies, the Commercial Trust & Savings Bank, or the Central-State National Bank of this city.

CASH WITH ORDER. Please send money with the order sufficient to cover the whole bill, and remit by express money order or registered letter. Checks covering payment of goods must include 10 cents for collecting them. You will avoid delay by remitting by express or postoffice money order. We decline sending goods "Collect on Delivery" unless remittances be made on account to guarantee acceptance. **Our terms are cash; we do not open any accounts.**

THE PRICES WE QUOTE on vegetable seeds and seeds will hold good as long as stocks last. The prices on grass seed, grains and all farm seeds are those ruling January 1, 1917, and are subject to change. As far as possible we will fill in full all orders for seeds that are quoted subject to variation in price, but if market value will not permit this, we will send all that money remitted will pay for.

NON-WARRANTY. Most of the failures with seeds, plants and bulbs are due to causes entirely beyond our control, such as unfavorable weather or soil conditions, too deep or shallow planting, etc., which renders it impossible for us to guarantee success, and, although we take all possible care to supply only such goods as will, under proper conditions, produce satisfactory results, we will give no warranty as to description, quality or productiveness of any of the seeds, plants or bulbs we send out, and will not be in any way responsible for the crop, and every order for articles named in this catalogue will be executed on these conditions only. If they are not accepted on these conditions, they must be returned at once. It must, however, be plain to every one who gives the matter the slightest thought, that it is to our best interest to send out only such stock as will not only grow, but prove true to name and description.

Schwill's Select Sweet Peas

There are hundreds of both Spencer's Orchid-flowering and Grandiflora varieties of Sweet Peas, many of which are practically identical and still others which lack either size, purity of color, vigor or some other characteristic which all first-class sorts should have. It would be an easy matter for us to greatly extend our list; but we think it best to confine our offers to such sorts as are really first class, and every variety we offer is entitled to a place in the front rank of Sweet Peas.

Cultural Directions—Sow in the spring as soon as the ground can be prepared in a deep, rich soil and for succession until the middle of April. Open a drill 4 to 5 inches deep, and cover the seed from 2 to 3 inches. As the vines grow up, draw the soil up against them for support. A row of brush or wire netting should be placed between them for the vines to trail on. Pick flowers closely and do not allow to go to seed.

Inoculate this
Seed with
FARMOGERM.

White-seeded varieties should not be sown until the ground is comparatively dry and warm. If sown under cold, wet conditions, the seed will rot in the ground. With few exceptions, Sweet Peas are black-seeded, and these do not appear to be affected like the white-seeded sorts.

Sheep manure and Nitrate of Soda are the best fertilizers for Sweet Peas; apply lightly alongside of plant not too close. Bone Meal is also fine, and should be used if your soil is poor.

Tree and Shrub Planting.

Tree and Shrub Planting—Dig the hole deep and very much larger than is necessary to admit all the roots in their natural position, keeping the surface and subsoil separate. Cut off broken and bruised roots and shorten the tops to half a dozen good buds, except for fall planting, when it is better to defer top-pruning until the following spring.

Fill up the hole with surface soil, so that the tree will stand about as it did in the nursery after the earth is settled. Work the soil thoroughly among the roots, and, when well covered, tramp firmly. Set the tree firm as a post, but leave the surface filling (or poorer soil) light or loose. No staking will be required, except for very tall trees.

Spraying.

Spraying—We cannot be too emphatic in impressing on the horticulturist to spray his garden, fruit trees and grape vines if he desires good fruit.

Every fruit grower should purchase a spraying apparatus; they can now be had for a small sum. Be careful in keeping your solution continually stirred.

One secret of spraying is to force the liquid hard against the foliage, so all the insects may be touched. This can be accomplished successfully only by using a force pump. Spraying your trees will save 90 per cent of your crop. It is worth all your labor and expense to try it.

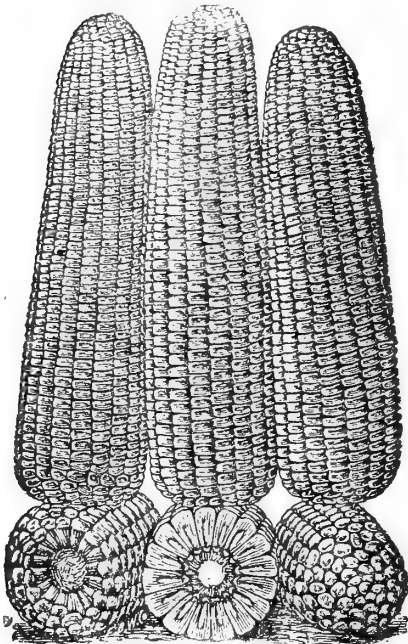

Selected Seed Corn

"The secret of good corn crops is largely in the seed. Only the best should be planted."—Prof. R. A. Moore, Wisconsin College of Agriculture.

The deep interest now taken by the farmer in securing the highest quality of seed has enthused new life in the professional seed grower and our growers have not lagged behind, but have produced this year a very choice lot of seed corn.

We are in better position this year to furnish you the best selected and graded seed corn, and we know that you will never regret if you try it.

White Varieties.

Schwill's Prize Medal Corn

Schwill's Prize Medal—The largest white corn grown; matures in 120 days. It is vigorous, healthy, a rank grower and an enormous yielder. A deep near gourd seed grain, sound as a dollar, ears a full foot long. On good ground will make 60 to 75 bushels to the acre. A whacking big ear with a big stalk. Truly a Southern favorite. It is also a fine ensilage variety on account of its heavy foliage and stalk. Qt., 35c; 4 qts., 85c; pk., \$1.50, parcel post paid. By freight, not prepaid, 4 qts., 60c; pk., \$1.00; bu., \$3.50.

Stephenson's Red Cob White Gourd Seed—A very desirable deep grain, pure white variety, ears about ten inches long with a very small red cob well filled to the end. Stalks medium tall but are very heavy, therefore almost storm proof; good size ears with a long grain and a very small red cob, and will produce two ears to the stalk. Stephenson's Red Cob Gourd Seed Corn is as well adapted to bottom lands, and does equally well on rich uplands, the grain having enough flint in it to avoid rotting. In our opinion this corn will prove one of the best deep grain corns for the South, as it will mature earlier than the tall growing varieties. Our stock is direct from the originator and pure bred, every ear handled selected, tipped, and butted and shelled by hand. Qt., 35c; 4 qts., 75c; pk., \$1.50, parcel post paid. By freight, not prepaid, 4 qts., 50c; pk., \$1.00; bu., \$3.50.

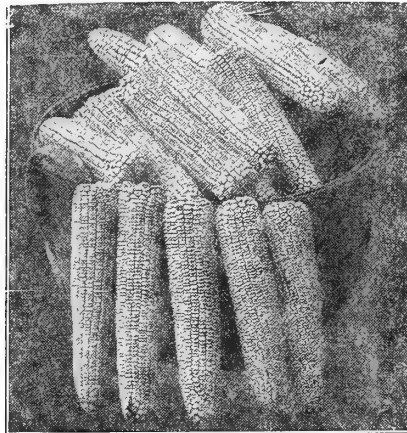

Hickory King—100 days. The cob is very small, grain broad, white. Does well on thin land. It ripens in from 100 to 110 days from time of planting. Qt., 35c; 4 qts., 75c; pk., \$1.25, parcel post paid. By freight, not prepaid, 4 qts., 50c; pk., \$1.00; bu., \$2.75.

North Carolina White Prolific—A fine variety of white field corn. It is very hardy and can be planted very early, as well as late. By parcel post, qt., 30c; 4 qts., 75c; pk., \$1.25. By freight, not prepaid, 4 qts., 50c; pk., 75c; bu., \$2.75.

By freight, not prepaid, qt., 30c; 4 qts., 70c; pk., \$1.00; bu., \$3.50.

Mesby's Prolific—This is a Southern corn, and is recommended for general crop. It is purely white, small cob, deep full grain, neither too hard nor too soft, and stands crowding in the drill as close again as any other kind. Ears of medium size, but long. Our stock is extra select and pure this season. Qt., 35c; 4 qts., 75c; pk., \$1.25, parcel post paid. By freight, not prepaid, 4 qts., 50c; pk., 75c; bu., \$2.75.

Mexican June—A strong, robust grower, sending the roots deep into the soil. Stands heat and drouth well. Should be planted in succession from middle of April to end of July. Qt., 35c; 4 qts., 75c; pk., \$1.25, parcel post paid. By freight, not prepaid, 4 qts., 50c; pk., 75c; bu., \$2.75.

Tait's White Dent—A pure white early corn, bearing two good ears to the stalk, maturing in 90 to 100 days. The cobs are unusually small for the size of the corn. The ears are medium sized, 14-rowed. Plant it for early crop as it makes before summer drouths. Qt., 35c; 4 qts., 85c; pk., \$1.50, parcel post paid. By freight, not prepaid, 4 qts., 60c; pk., \$1.00; bu., \$3.00.

Vardaman's Stooling—A pure white corn with good size ears that will produce from two to ten ears on every hill, depending on the land. The average yield of this splendid corn for the last three years was 94 bushels per acre. The suckers on this corn produce corn for three or four weeks later than the main stalks, which in case of drouth, extends the fruiting season three weeks longer than any other corn. Qt., 40c; 4 qts., 75c; pk., \$1.50, parcel post paid. By freight, not prepaid, 4 qts., 50c; pk., \$1.00; bu., \$3.50.

Good Cotton Seed

Our planting seed is mostly grown in this county, some varieties in Dyer and Lake counties to the north of Memphis, and other varieties we get from reliable growers in the Carolinas, so when buying your cotton seed from us, you get them from sections that are free from boll weevil. Don't risk planting seed grown in Mississippi or Louisiana the coming season. It's dangerous.

Send us your order and get Dependable Stocks, grown entirely out of the boll weevil district. All prices subject to market changes, f.o.b. Memphis. Write for special prices on large amounts. All cotton seed we quote are based on 30 pounds to the bushel, which is the standard. Please bear this in mind when ordering.

Polk Early Maturing Staple Cotton

Polk Early Maturing Long Staple Cotton—The earliest staple cotton on the market. Our New Polk is also the most productive strain of staple cotton in the world. Planters who bought this seed last spring at fancy prices declare it has paid them handsomely. Cotton mills, farmers and cotton buyers are more than enthusiastic over this cotton, as it brought fine prices and always finds a ready market. Polk Cotton was started from one plant by the originator some years ago, and by careful work he has developed a cotton that is earlier and superior to Columbia, Webber, Keenan, etc. Bolls medium to large, five-locked, easily picked, staple 1 4-16 to 1 5-16, and fibre of excellent quality. On good land it will average a bale to the acre, if season is any way favorable. At the gin it turns out 31 to 32 per cent. We feel sure every one that plants the Polk Cotton will be highly pleased, it being particularly well adapted for most any good land, which has been proven after various most careful tests. Our seed stock is grown in this Shelby County. Price, 1 bu., \$2.25; 10 bu., \$20.00. Ton price on application.

Express—This variety is now well established. Our seed is grown in this, Shelby county, Tenn., and is free from boll weevil. Express Cotton is early, productive and makes staple 1 1-8 to 1 3-16 inches, depending on the land. Many large farmers use Express entirely. The Delta Branch Experimental Station tests show Express stands first out of 28 varieties on their trial grounds. Price of home-grown Express Seed, 1 bu., \$2.00; 10 bu., \$17.50. Ton price on application.

Webber—Large boll, long staple. Was originated by D. R. Coker. A heavy fruiting variety, making lint 1 1/4 to 1 3/4 inches in length, and maturing very early. We consider Webber one of the very best long staple cotton. Our seed is pure, and grown for us by Mr. James W. Young, one of the most reliable farmers in this county. Mr. Young has a pure and select strain of Webber cotton that will give you perfect satisfaction. Price, bu., \$2.00; 10 bu., \$18.50. Ton price on application.

Genuine King's Early Improved—A very early, small balled, small seeded variety, always thirds itself, and matures always two weeks ahead of any other sort. On account of its extreme earliness it is largely planted in the boll weevil infected sections, as it matures the most of its crop before the weevil makes its appearance. Our King Seed is raised in North Carolina, out of any boll weevil district. Price, bu., \$2.00; 10 bu., \$19.00. Ton price on application.

King's Improved Prolific Cotton

Half and Half—To those planters who prefer a short staple, and to those who have boll weevil to contend with, or who are threatened with boll weevil, we recommend Half and Half as the most valuable short staple ever developed. It is earlier than King's or Simpkin's, and stands drouth better than the average varieties. Staple very short, about 1 inch, but when taken in consideration the high percentage of lint it turns out, which runs from 44 to 50 per cent, according to the fertility of the land and the season, we feel sure any one will be well reimbursed that plants Half and Half the coming season. Our seed is grown in this, Shelby county, and was obtained two years ago from the originators in Georgia. Price, 1 bu., \$2.50; 10 bu., \$22.50. Ton price on application.

Wannamaker Cleveland—Plant vigorous, thrifty, with low, close-jointed basal fruit limbs; large bolls, easily picked; medium sized seed, grayish to greenish; 34 to 38 per cent lint, 1 1-8 to 1 1-4 inches long, fine and strong. Earliest and most prolific at experimental stations. Especially recommended for sections where boll weevil is present. Our seed is grown in South Carolina. Price, bu., \$2.00; 10 bu., \$19.00. Ton price on application.

Early Triumph Big Boll—It is the earliest of all big boll varieties. It makes from 36 to 41 per cent of lint (thirty-six to forty-one pounds of lint to 100 pounds of seed cotton). Bolls are usually five lock, very large and solid, therefore making more cotton than other spongy large bolls. Lint of the Triumph Cotton is silky, 1 1-16 to 1 1/2 inches in length. This seed is raised for us in this county. Bu., \$2.00; 10 bu., \$19.00. Ton price on application.

Columbia Big Boll—Adapted to all sections; big bolls, does not blow or drop out easily; one of the best varieties. Plant grows large and strong, resists dry weather; will turn out 37 to 40 per cent lint. Matures early. Staple 1 1/4 to 1 3/4 inches. West Tennessee grown seed. Price, bu., \$2.00; 10 bu., \$18.50. Ton price on application.

Otto Schwill & Co.,

Gentlemen:

Please note that I ordered last year (1915) your Dollar Collection of seed, and will say that I planted them with best results for a garden in this section. I used vegetables for a family of six, also for five hogs, and then last of all to make a short story interesting, divided vegetables with my neighbors.

Will close by saying that your seed are the very best I ever used. You may print this letter if you wish.

I remain as ever, one of your satisfied customers,

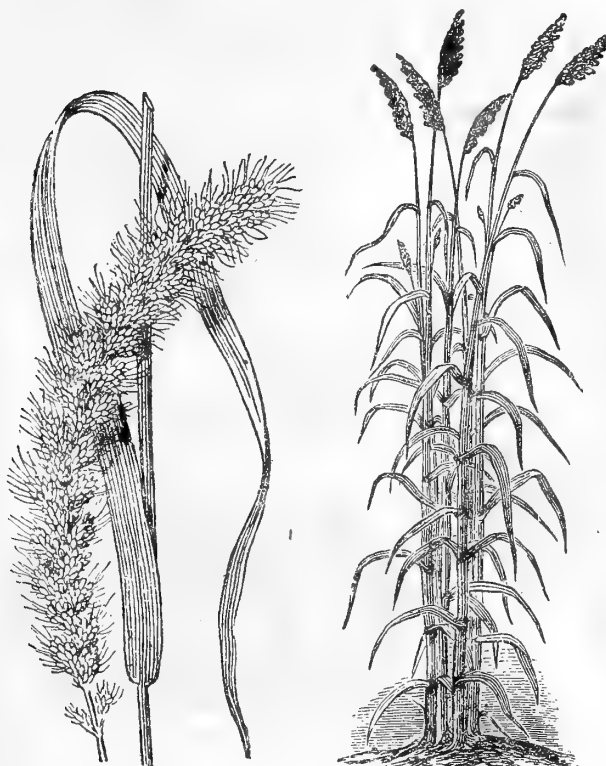

RICHARD M. DAWSON.

High Grade Fertilizers

The prices given below are net cash and F. O. B. Memphis. Special prices on car lots and larger quantities delivered at your depot will be given on application.

Best Results From the Soil—If you want to obtain the best results from the soil, we are compelled, by sheer necessity, to use commercial fertilizers, and you cannot help yourself. It serves no good purposes to use plenty of nitrogen and fall short on phosphoric acid and potash; to use phosphoric acid and fall short on nitrogen and potash; or to use potash and fall short in phosphoric acid and nitrogen, because neither two of the three will compensate for the absent one, no matter how great the quantity. There is only one way to do; that is to use a complete fertilizer in which these elements are embodied, and each will perform its particular function.

The
Standard
Inoculation

FARMOGERM

High-Bred
Nitrogen-
Gathering
Bacteria

Alfalfa, Clovers, Soja Beans, Cow Peas, Lespedeza, Velvet Beans, Peanuts, Vetch, Garden Beans, English Peas, and all other pod-growing plants called legumes, enrich the soil through the action of small bacteria growing upon their roots. These bacteria live only upon the roots of legumes, and by an action of their bodies extract the free nitrogen of the air, and deposit it around themselves as nitrates, thus forming little sacks or nodules on the roots of the growing plants. These sacks furnish the growing plant with all the nitrates it requires, and still leaves large amounts unused in the soil, ready for future crops or other crops growing at the same time with the legumes.

The method of transfer of soil for inoculation is both costly and dangerous; weed seed, soil and plant diseases are transferred in this way. All inoculations should be done by means of the pure cultures of nitrogen-gathering bacteria, which are free from contamination and contain only active bacteria of the proper kind.

To Increase Crops and Enrich Soils—In ordering be sure to state what kind of bacteria you want—each crop takes a distinct kind. You should grow legumes whenever possible. Clover, Vetch, Alfalfa, Cow Peas, Soy Beans, etc., will greatly benefit all soils if they are inoculated at time of planting. The Department of Agriculture calls attention to this most important method of soil improvement, and last year a large number of our customers benefited by planting all available land, with the result that their farms are better and their crops larger. Plant some of the legumes with your corn, cotton or cane—it will pay you many times over. If you have a worn-out field get some good fodder from it and get it ready for next year by planting it to a legume that has been inoculated with

Trade FARMOGERM Mark

Nitrogen sacks on roots of Soy Beans equal to \$25 worth of high grade fertilizer. All it cost was \$1.50 per acre.

Seed and Soil Inoculation Highly Endorsed by Farmers and Experiment Stations Everywhere—Send for Further Information Now.—This preparation has been on the market for a long time and we recommend it to our customers as being perfectly reliable and highly profitable to use. It comes in bottles ready for use. Commence this year to build up your farm and your crops. The use of Farmogerm inoculation will do it at a fraction of the cost of any other way. Each crop takes a different bacteria—always state what you want to inoculate.

Farmogerm is a pure culture or growth of nitrogen-fixing bacteria that have been selected and bred up to transform large amounts of nitrogen from the air into soluble nitrates. These bacteria are grown in a jelly, or food, in which they remain active for long periods of time, and are sent out in a bottle which admits the necessary supply of pure air, yet keeps out destructive contamination. If Alfalfa can be grown on hot, sandy land of South New Jersey, why can't you grow it?

Testimonial.

Columbia, S. C., August 17, 1916.

One of my customers used All-Crop Farmogerm on a measured acre of cotton. They told me that the cotton it had been used on was far and away better than the remaining cotton in the field.

W. W. Ball, Editor of The State used All-Crop on cow peas. He has a forest of cow peas.

If All-Crop Farmogerm will make more cotton, you will be able to sell twenty times as much of it as you have of Farmogerm.

Signed, EDMUND FELDER.

Price, 1 lb., 25c; 5 lb. pkg., 90c; 10 lb., \$1.60; 25 lb., \$3.50; 100 lb., \$12.00. By parcel post, 1 lb., 35c; 5 lb., \$1.00; 10 lb., \$1.75.

Pratt's Sulfocide—The very best and safest preparation to use on peach trees. This is a very important spray for peaches, and should not be omitted. A second spraying should be done when fruit is about the size of a hickory nut. Further instructions on request. Price, 1 pt., 50c; 1 qt., 75c; 1 gal., \$2.00. Not mailable.

Pratt's Scalecide—One of the very best preparations for controlling San Jose Scale. The longer the trees are sprayed with Scalecide the more beautiful and healthful and fruitful they become. Scalecide is easier applied than Lime Sulphur. It is non-corrosive and non-poisonous. One gallon of Scalecide diluted for use will spray twice as many trees as two gallons of diluted Lime Sulphur. This is due to its spreading properties. Ask for Pratt's booklet on Scalecide. Greatest Improvement **PAKRO SEEDTAPE** in Seed Planting FOR BETTER GARDENS

To be assured of a better garden this year, plant with Pakro Seedtape—not because of what we claim it to be, but because of what others have proved it to be.

E. J. Kyle, Dean of the Agricultural College of Texas, tells of results obtained from Pakro Seedtape at the college. "All the Seedtape planted did exceptionally well. The plants made a splendid appearance and the stand was especially good."

Pakro Seedtape consists of seeds selected with the utmost care by experts from the very best of prize winning strains; they are put in a tissue paper tape, spaced exactly the correct distance apart. No thinning out is necessary. Stunted, slow growing plants, due to overcrowding in planting the seeds are avoided. The paper absorbs and holds the moisture, and thus produces a quicker and higher percentage of germination. It is more economical because only a sufficient number of seeds are planted—with loose seeds there is a great deal of waste. Since you can plant a whole row at once, there is a great saving of time and labor.

Use Pakro Seedtape in your garden this year and you have the assurance of thousands who have tried it that you will have a more successful garden than ever before. And here are the experiences of some of these thousands:

"I never had a better garden with an experience of 35 years."
—L. C. Arensburg, M. D., East Millsboro, Pa.

"I find that Seedtape grows quicker than any other seed with far less trouble to plant."—Miss Ethel Bowman, Troy, Ohio.

"The same amount of seed goes twice as far as other kinds."—Mrs. William Behringer, Ann Arbor, Mich.

"Pakro Seedtape showed fine germination quality, the vegetables were fine varieties."—O. L. Broderick, Upper Sandusky, Ohio.

"Results from Pakro Seedtape were very gratifying. You surely have hit the happy way."—D. F. Fulmer, Lore City, Ohio.

"Results from Pakro Seedtape came up to my most sanguine expectations."—R. J. Chapman, Houston, Texas.

"Have had remarkable experience in planting Pakro Seedtape. They germinated in an exceptionally quick way and the plants appeared above the ground in absolutely regular order, not one missing in several rows. I am a Horticulturist and Rancher of some little experience."—F. A. Koenig, South Paris, Maine.

"We obtained a remarkable crop from our planting of Pakro Seedtape."—Jos. Keenan, Cazenovia, N. Y.

Pakro Seedtape come in 30 varieties of Vegetables and 18 varieties of Flowers, and by carefully following the directions printed on each box, your garden will prove a delight and a surprise.
